Re: Docket No. E-O1933A-09-0340

Dear Chairman Mayes,

Fotowatio Renewable Ventures, Inc. ("FRV" or the "Company") would like to follow up and respond to comments in a letter sent to you by Mr. Rick Westfall, dated September 17, 2010, and in a response letter from Tucson Electric Power Company ("TEP"), dated October 8, 2010.

FRV is a global solar independent power producer. The Company develops, owns and operates solar power plants and currently has over 200MW in operation and under construction throughout Europe and the US for utilities, government agencies, and large corporations. Within the US, FRV has successfully developed over 41 MW of solar projects, which is comprised of 23 operating projects in eight states, and includes our 14.2 MW solar installation at Nellis Air Force Base. In 2009, this U.S. portfolio of solar generating plants achieved a performance level of 102% of estimated production. FRV also has 1.4 GW of new solar projects under development in the United States, and is committed to continuing its mission of providing clean energy to consumers.

As the developer of FRV Tucson Solar, the solar photovoltaic project (the "Project") that is the subject of the aforementioned letters, FRV supports the role of the public process, and would like to inform you about its activities to communicate with and solicit feedback from the public about this Project.

- FRV held its first community meeting for the Project on May 5, 2010. The purpose of the meeting was to inform residents near the Project site about the proposed Project and listen to their questions and concerns. At this meeting, residents were provided with contact information for FRV so that they could provide additional questions or comments about the Project following the meeting.
- A second community meeting was held more recently on October 26, 2010, with the purpose of providing residents with an update on the Project's development plans (including a detailed presentation of the proposed Project site plan) and to solicit additional feedback from the community prior to a November public hearing with Pima County for the Project's Conditional Use Permit.

Our interactions with the public have been informative and have influenced our decisions about the Project's design. FRV will continue this public dialogue through additional community meetings. TEP and Tucson Water (attending on behalf of the City of Tucson) have attended both meetings and provided support for the Project by participating in these discussions with the public.

Additionally, in response to Mr. Westfall's specific concerns, Mr. Westfall was present and participated in both of these community meetings. Additionally, Mr. Westfall has communicated on a number of occasions with FRV and TEP about his concerns, and FRV has provided Mr. Westfall with information about the Project as our development plans have progressed.

FRV would also like to note that we are pleased to be working with the City of Tucson, with whom we have entered into an agreement to lease their property for use as the Project site. The Project site is 305 acres, of which the Project will use 200-250 acres, with the remaining acreage dedicated to the preservation of native vegetation. FRV has not entered into negotiations with any adjacent landowners and does not seek adjacent property for this Project.

Please do not hesitate to contact me at your convenience should you, any Commissioner or member of Staff wish to meet concerning the Project and the public process thus far. Also, please let me know if you have any questions or would like additional information regarding the Project or FRV's public participation process to date and its plans for continuing the open exchange of information going forward.

Sincerely,

Jose Benjumea
President

Fotowatio Renewable Ventures, Inc.
